

# DR. BUFFY LLOYD-KREJCI

INFECTION PREVENTION & CONTROL CONSULTANT

Dr. Buffy Lloyd-Krejci, also known as "**Dr. Buffy: The Germ Slayer**": is one of the foremost authorities on infection prevention and control in nursing homes and long-term care facilities such as nursing homes and other underserved and vulnerable populations such as Native American Tribal communities. She is a frequent contributor and interview source for national and trade press concerning infection prevention and control and mitigation. She is the author of "Broken: How the Global Pandemic uncovered a nursing home industry in need of repair and heroic staff fighting for change," set to be released in the summer of 2022. Her practice, IPCWell is headquartered in the Phoenix metropolitan area and is devoted to mitigating infectious diseases and inappropriate antibiotic prescribing in all healthcare settings to reduce adverse events, infections, antibiotic resistance, re-admissions, and death. Dr. Buffy consults with health care facilities across the United States and internationally (Doctors Without Borders).

With more than 20 years of healthcare & public health experience, Dr. Lloyd-Krejci's data-driven approach is hands-on and collaborative. Using her experience with more than 700 healthcare facilities across the United States she works tirelessly to combat the estimated one to 3 million infections leading to more than 380,000 deaths every year in the nursing home industry. She has worked with the CDC and other organizations on infection control studies and research such as the Arizona Emergency Preparedness Infection Control (EPIC) grant, the Institute of Health (IHI) Project ECHO, a hub-and-spoke knowledge-sharing network to support NH leadership during COVID-19.

As a result of her work with more than 200 nursing homes during the COVID-19 pandemic and over 500 prior to 2020, Dr. Lloyd-Krejci wrote a book entitled: **Broken: "How the Global Pandemic uncovered a nursing home industry in need of repair and heroic staff fighting for change,"** set to be released in the summer of 2022. The book describes challenges within the nursing home industry with infection prevention and control prior to the pandemic, the catastrophic consequences of COVID-19, and what actions are needed to improve the quality of care delivered to this vulnerable population now and into the future. And how to use this dark season to transform the long-term care industry into a supportive healthcare system that provides safer, more reliable care for our loved ones.

During the COVID-19 pandemic, Dr. Lloyd-Krejci has taken a "boots on the ground" approach to support healthcare facilities such as nursing homes across the nation, doing in-person, deep-dive assessments to offer immediate support to healthcare workers on the frontlines. She has traveled around the country to long-term care facilities to assess, train, and educate with humor, vigor, and empathy. She has developed practical tools, led training and "train the trainer" programs, provided ongoing support to IPC teams, and created the "LTC playbook" for Doctors Without Borders infection control support for early use in hard-hit areas of Detroit and Houston. When Dr. Lloyd-Krejci is not on-site, she offers her expertise to other U.S. and international programs, developing content for IPC curriculum, conducting virtual clinics on infection control EPIC and Emergency Preparedness Infection Control disaster programs, providing infection prevention and control support to the Havasupai Native American tribe, and supporting the CDC/White House Vaccinate America Forum.

Dr. Lloyd-Krejci has also worked as a Quality Improvement Advisor on Healthcare Acquired Infections with Health Services Advisory Group, conducted research as a Research Assistant with the Mayo Clinic in Arizona, and has served as Hospital Unit Coordinator for Arrowhead Hospital, Straub Clinic & Hospital, and Banner Good Samaritan Hospital. She holds a Doctor of Public Health with a specialization in Epidemiology from Capella University, an M.S., in Biomedical Informatics from Arizona State University, a B.S in Applied Mathematics from Arizona State University, is Board Certified in Infection Prevention and Control (CIC), and studied French abroad at Universite' de Lyon, France.
